1 Introduction

Neural text to speech has improved quickly in recent years [1, 2].

Small models now run on a laptop without a server.

This paper studies reading scientific papers aloud.

2 Method

We select a sentence and start reading from that point.

Reading continues across the page break without stopping.

The second page continues the method section here.

Our results show that listening helps with long papers.

3 Conclusion

Reading aloud makes papers easier to review on the go.
